Dear Friends and Fellow Enthusiasts, October 2026

Another challenging growing season has come to a close, with drought and extreme heat over many parts of the country having impacted growers nationwide. However, the warm and dry weather in September saw our Dahlias build up to a stunning crescendo of colour which has been enjoyed by visitors from near and far. Relaxing weekend strolls walking round the Dahlia fields seem to have become an annual event for families and friends, and it is a pleasure for us to see how much enjoyment people get from being amongst the 7000 or so plants in our fields. Thank you to everyone for your comments and support throughout the year and, of course, entrusting us with your custom. It is humbling to receive so much positive feedback and to see so many recommendations for us.

The hot weather throughout the year had quite an impact on our own growing season, causing a few production issues. These have been reflected in some of the changes we have had to make in this, our catalogue for the 2027 season.

For next year, we have adopted to grow our Dahlia rooted cuttings in a slightly larger rooting cell tray, which we refer to as MIDI PLANTS, more details of which you will find on page 6. Due to increasing pressure on resources, we will no longer be offering the larger Garden Ready plants, though we will have these available at our West Heddon Nursery from the end of April. Many Dahlias that we plant out in mid-June are effectively midi plants, and they never fail to astound us as to how quickly they establish themselves and grow away.

As for Dahlia Pot tubers, these will only be available in a limited range of varieties and quantities. We will be publishing a separate list and order form for these when ALL field tubers have been lifted and pot tubers knocked out and checked, hopefully by the end of November. It will be emailed to all who have registered an interest and the list will be added to our website.

Sadly, we have come to the heart wrenching decision that we can no longer justify offering Chrysanthemums in the usual manner. For the 2027 season they will be available as "our choice" collections only, with plants available from mid-end March. We realise that this will come as a shock to many but demand and growing habits have changed substantially over recent years. We will however have a range of plants available in our shop at West Heddon from the middle of March.

As we move into the winter months we are preparing to lift, by hand, our field tubers and Chrysanthemum stools, with the aim of having them all up and sorted by the end of November. We are very aware that the weather could change at any time, so we must make sure we are ready and all preparations made, such as final checks on labelling and quality before lifting and clearing all the fields, including rolling up 1 mile of nets! When January arrives, we should all be set up and ready to go with a new season of propagation in front of us. Our commitment as always will be to produce and supply the quality plants you are accustomed to and continue to provide the same level of service.

We are just a small team and we endeavour to respond to any queries or requests for advice as soon as we can, but in busy times of the year this may take a few days and we thank you for your patience in advance.

With best wishes for the coming season
David Hall and the team at Halls of Heddon.

TOO MUCH CHOICE?
WHY NOT LEAVE IT TO US AND SAVE WITH OUR
SPECIAL COLLECTIONS OF DAHLIAS AND CHRYSANTHEMUMS
Featured throughout this catalogue, these come at great savings compared with buying individually priced plants and are an easy way to order, especially if you are not sure what to choose. Each collection is supplied in as wide a colour range as possible for the classifications covered, with all varieties being labelled for your convenience.

NEW FOR 2027

DAHLIA "BOTTESFORD BLUSHER"(p26) a new but unclassified Small Decorative raised by David Longstaff, from Lincolnshire. Shades of coral and apricot on good strong stems growing to approx. 1.2m. Extremely weatherproof blooms which we see as being very popular for garden and cut flower.

DAHLIA "HILLCARNE" (p27) another of a long line of introductions from Tom Cleghorn, from Fife. I spotted this lovely soft yellow miniature decorative at the NDS trials last year. Compact plants, up to about 1- 1.1m, produce masses of blooms with good strong stems.

5% DISCOUNT

ON DAHLIA MIDI PLANT AND CHRYSANTHEMUM ORDERS OVER £85.00 PLACED AND PAID FOR BY 15th DECEMBER 2026.

(Excludes pot tubers, carriage & packing and sundries)

GENERAL TERMS AND CONDITIONS

PLEASE READ CAREFULLY BEFORE ORDERING

THIS CATALOGUE CANCELS ALL PREVIOUS CATALOGUES WITH PRICES REMAINING VALID UNTIL 30TH JUNE 2027

HOW TO ORDER AND PAY

- Minimum order value £15.00 excluding carriage and packing.
- Fill out and return the enclosed order form to W.N.Hall & Sons Ltd (T/A Halls of Heddon), West Heddon Nursery, Heddon on the Wall, Northumberland, NE15 0JS.
- Payment required with order.
- Please make cheques payable to **W N Hall & Sons Ltd.**
- Credit/Debit cards will be charged on placing your order.
- If required, we can ring you for payment details once your order is booked, or we can send a secure payment link.
- Please note - we will not be reopening our online shop this season
- Regretfully any cheques returned unpaid will incur a £15.00 charge.

ORDER DEADLINES

Early ordering enables us to plan our production more efficiently so please place your order a minimum of 5 weeks before your requested date. Orders after the 9th April can only be accepted on a "substitutes acceptable" basis unless they are for our special collections.
We will make every effort to supply plants during the period requested but delays may occur in periods of high demand.

ACKNOWLEDGEMENT

All orders will be confirmed and an order acknowledgement sent, either via post or email, generally within 7-10 days. Please check that we have your details recorded correctly to ensure you receive your plants safely. Please quote the order acknowledgement number in the event of any queries. This can be found under your address details on the left hand side.

SUBSTITUTES

We reserve the right to substitute in the event a variety is unavailable at the time of despatch, unless 'No Substitutes' is specified on the order form. We will always try to match the variety as closely as possible. Please use the order form to indicate whether flower colour OR variety classification is the priority. Orders where 'No Substitutes' is selected may result in delayed despatch or incomplete orders, with remainder following at a later date.

DELIVERY TIMES

We would suggest using the table on page 6 for Dahlias and 38 for Chrysanthemums to help you determine the best time to receive your plants based on the facilities you have available. Please indicate this when placing your order and be sure to provide your email address and mobile number. This will allow for delivery notifications at time of despatch. It would be helpful if you could notify us of any periods that you are not able to take delivery-e.g. holiday dates.

CARRIAGE & PACKING

There is a standard carriage and packing charge of **£8.95** per order, regardless of the number of plants required. All green plants will be sent 1st Class Royal Mail*. Tubers, when available, will be sent 2nd Class Royal Mail.

Please note: Any order requiring different delivery periods eg. early Chrysanthemums with later delivery for Dahlia Midi plants, will be treated as separate orders and an additional carriage charge will apply.
*We may occasionally use a courier service at our discretion.
Please note - It may take 2-3 days for delivery to more remote areas.

COLLECTION OF ORDERS AND PERSONAL CALLERS

You can opt to collect your order from our West Heddon Nursery and in this case we will advise you by post, telephone or email when your plants are ready to pick up.

NORTHERN IRELAND, EU and WORLDWIDE CUSTOMERS

It is no longer viable for us to accept and process orders to these destinations due to the Windsor Framework and the NIPHL scheme, as well as the additional requirements for exporting to the EU and Worldwide as a whole.

GUARANTEE

All green plants are despatched by first class post or next day courier service to ensure you receive them in the best possible condition. Please contact us immediately if any plants fail to satisfy on arrival. We will replace or refund the full cost of the plants providing they are returned to us within seven days. Beyond this period we cannot be held responsible for the growth and performance of plants supplied.

PRIVACY POLICY

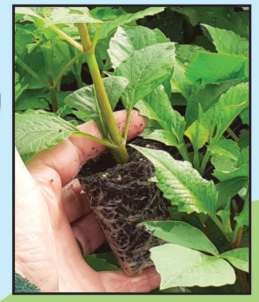
You have received this catalogue as you have ordered from us in the last 3 years or requested to be added to our mailing list. Your personal information will not be passed on to third parties. We will however retain your details for the purpose of communicating with you about your order and for our own marketing purposes. We will automatically send you our Catalogue for three years following an order unless you opt out. You can opt out at the time of ordering or by contacting us using the details on the back cover. All information is collected lawfully and in accordance with the General Data Protection Regulations 2018. Full details of this policy are available on our website.

Abbreviations used throughout the Catalogue

SR	Sole release variety	u	Variety not classified
C	Good for cut flower	AGM	Award of Garden Merit
E	Suitable for exhibition	AM/E	Award of Merit for Exhibition
G	Good for garden display		

DAHLIAS

The range of Dahlias we offer includes varieties suitable for the show bench, garden display and for cutting. All have been grown and propagated from our own stock of tubers lifted from our Northumberland flower fields. Plants grown have been fully assessed throughout the flowering season for trueness to type, performance, health and vigour.
We offer Dahlias for sale in 2 forms:-



Dahlia Midi Plants

These are strong rooted cuttings produced in a larger plug tray than previous years so plants should have a better and stronger root system on receipt. Each cell in the multicell trays we use measures approx. 5cm x 5cm x 6cm. These are the same size tray as we grow our own stock plants in and from which we plant out directly into our fields in June. For orders despatched early in the season, it will still be beneficial to pot these up and grow on until safe to plant outside. On receipt, they should be unpacked immediately and potted on into a 9-12cm pot using a good quality compost.
Delivery is from late March to mid-June, with plants being supplied according to the facilities that the customer has available.
PLEASE NOTE- Dahlias will NOT tolerate any frost and seasons will differ from one year to the next. The information we provide can therefore only be used as a guide. If no frost protection is available, we would suggest customers order plants to be delivered in June. At this point they can be safely planted out into the garden after a couple of days acclimatising, as long as all risk of frost is over.

Dahlia Pot Tubers

Due to the impacts of this growing season, we have not included pot tubers in this catalogue. Once all our stock has been lifted and assessed, we will be able to produce a list which we will add to our website. The range of varieties and quantities available will be limited. Please contact us if you would like this emailed or posted when this becomes available.

Garden Ready Dahlias

Owing to increasing cost pressures, we will no longer be offering garden ready plants as an option for ordering. We will have a selection of pot grown Dahlias available in our shop from the end of April through to June and beyond.

Delivery Times

We would suggest using the table below to help you determine the best time to receive your plants according to the facilities you have available for growing. Please indicate this when placing your order.

Facilities Available	Southern England	Midlands	Northern England	Scotland
Heated Greenhouse	End of March			
Cold Greenhouse	Mid April	Mid-End April	End April - Early May	Early-Mid May
Cold Frame	Early May	Mid May	Mid-End May	End May
No Protection	Mid-End May	End May	End May -early June*	Early June*

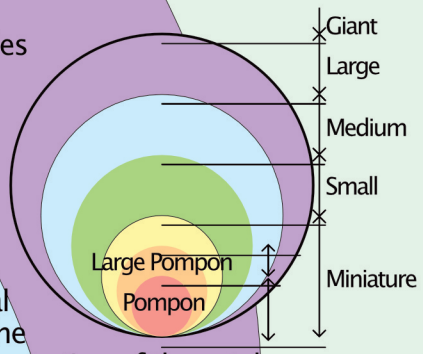
*Frost Protection may still be needed

Dahlia Quantity Discounts - Apply when 2 or more of the SAME variety of Midi Plants are ordered

Each Rate	£5.50	£5.85	£7.95
2-4 Plants	£4.95	£5.30	£7.50
5-9 Plants	£4.65	£5.00	£7.25
10+ Plants	£4.40	£4.75	£6.95

Classification - Size and Form

Varieties in our catalogue are divided into categories according to bloom size and formation as per the 36th Edition of the National Dahlia Society's Classified Directory. Where a variety is not classified, it is marked with a '**u**' and included in what we believe to be the most appropriate section after trial at the nursery, or from historical information.
The rings on this page offer an indication of typical bloom size for each category with a scale key on the right. This key is also shown throughout the Dahlia section of the catalogue.

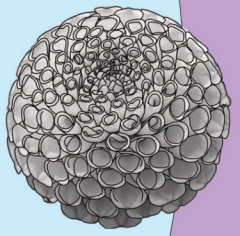


The drawings below give a representation of the different forms of Dahlias offered. Miscellaneous Dahlias don't fit into the categories below.

Single Dahlia

Waterlily Dahlia

Pompon Dahlia

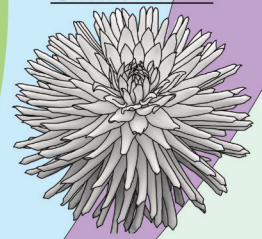


Fimbriated Dahlia

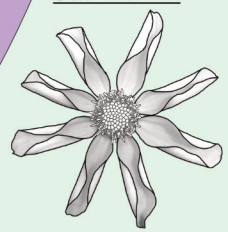
Anemone Dahlia

Decorative Dahlia

Cactus Dahlia



Star Dahlia



Collerette Dahlia

Ball Dahlia

Semi Cactus Dahlia

Paeony Dahlia

Dahlia Culture

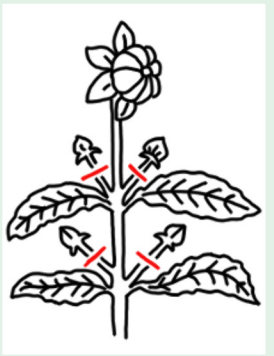
To perform at their best, Dahlias need an open sunny position with a well-drained, fertile soil, whilst at the same time needing plenty of water. Ideally, land for Dahlias should be well dug and manured in the autumn and a complete fertiliser applied at the rate of 75-100g (3-4oz) per square metre, about 2 weeks before planting. Purchasing pot tubers gives you the option of setting these away early in the season so that you can take your own cuttings to plant out when it is safe to do so. If you are not intending to use pot tubers for this purpose, then we would suggest opting for midi plants which will reward you with a great display of flowers from late summer and through autumn until the first frosts. The tubers produced can then be used the following season, either for taking your own cuttings from, or dividing and planting out. If you have the facility of a heated greenhouse, you can take delivery of Midi Plants from the end of March onwards. On receipt, plants should be potted on into 9-12cm pots using a reliable compost, taking care to shade from direct sun for the first few days and not over water. Cuttings potted in April may need potting on again to keep the plants growing strongly prior to planting out from the end of May in southern counties or early to mid-June in the Midlands, North and Scotland.

Planting Out and Stopping

Plant firmly and stake and tie in at once. If you are growing for exhibition, then giant, large and medium flowered varieties are best planted in a two row bed 60x60cm (24x24") apart with a space of about 1.2m (4') between beds. The suggested spacing for small and miniature flowered Dahlias is about 50x50cm (20x20") and about 1m between beds. To encourage the development of flowering stems, your plants should be 'stopped' by taking out the growing tip. This is usually done early to mid-June, although naturally later flowering varieties should be stopped earlier. Generally, giants and large should be stopped at 2 to 3 pairs of leaves, mediums at 3-4 pairs, and smalls, miniatures and pompons at 4-5 pairs of leaves from the base of the plant. Adopting this method should help produce sufficient stems on each plant from which the required number of blooms can be grown, ie: giants 3 to 4; large 4 to 5; mediums 6 to 8; and smalls and miniatures 8-12, though some thinning out and removal of stems may be required to help control flowering size. Too many blooms on a plant, particularly of the larger flowered varieties, will result in smaller flowers. In some cases, miniature flowered varieties will need a double stop, though this is only relevant when growing for showing.

Growing On and Feeding

Be sure to keep your plants well-watered during hot, dry conditions, preferably in the evening, but be particularly careful not to overwater! A few weeks after planting, you can start applying additional fertiliser, either as a top dressing, or more easily as a liquid feed. In the early part of the season, from June through to July, a high nitrogen feed could be applied, which will help promote healthy leaf and stem growth. From August onwards switch to a high potash fertiliser such as Vitax Dahlia Feed or even Tomato Food. The higher levels of potash will help with flower colour, stem strength and root growth.



Disbudding

Disbudding to produce long stemmed quality blooms should commence as soon as shoots develop in the leaf axils. As a general guide, the first 2-3 pairs of buds or growths below the terminal bud should be carefully removed, more for giant and large flowered varieties. Keep a careful check on plants at all stages to avoid any pest or disease outbreaks taking remedial action where necessary.

Dahlias for Garden Display

A brilliant display for the border right up until late Autumn can be achieved using all the above recommendations with just a few amendments. For spacing allow 50-60cm (20-24") between all varieties, except bedders where 30-40cm (12-15") is ideal. There isn't any need to disbud, though this will not harm the plants and would give better length stems for cutting for the house. Regular removal of old flowers will help promote a longer flowering season and keep plants looking at their best.

Lifting and Storage

Never rush to lift your Dahlia tubers as, unless the weather conditions are particularly cold or wet, they will be fine in the ground. We aim to have ours lifted by the end of November, as long as ground conditions are not getting too wet and no severe weather is forecast. Dahlias should be carefully lifted, all fibrous roots removed, and stems cut down to within about 10cm (4") of the tubers. Be careful to label each tuber as you lift them, discarding any which have produced shallow (daisy eyed) flowers or show signs of mottled foliage or stunted growth, as this could be sign of virus The tubers should be carefully dried before being stored in a frost proof place until required for propagation or planting out the following season making sure they are checked occasionally for excessive drying out or storage rot. If you have well drained soil and live in the southern half of the country you may find you can leave the tubers in with some success. As a precaution pile some straw, bracken or spent compost on top to act as a mulch and give added insulation.

Information regarding common pests and diseases can be found on the inside back cover.

A more detailed version of our cultural guides can be found online or can be requested by ticking the box on the order form.

Giant and Large Decorative Dahlias

These supersized flowers will certainly create the wow factor either in the garden or on the show bench. To achieve full potential Giants should generally be restricted to 2-3 flowering stems per plant whilst Large should be restricted to 4-5. Blooms of the 'Giant' varieties can reach over 250mm (10") with 'Large' blooms between 200 and 250mm (8-10"). Maximum bloom size for exhibition of large blooms is 260mm.

MDC10	5 Pairs Distinct Medium Decorative & Cactus	£46.50

Medium Fimbriated Dahlias

Good sized flowers can be achieved by allowing 6-8 blooms on each plant. The fimbriated varieties have evenly split or notched petals. Blooms of Medium varieties can be expected to be between 150 and 200mm (6-8"). Maximum bloom size for Exhibition is 220mm.

Collerette Dahlias

Hugely attractive to all types of pollinators, the flowers have a single outer ring of generally flat petals (ray florets) with a ring of smaller petals (florets) forming a collar. They make an excellent addition to any garden, particularly herbaceous borders.
Flowers are generally between 100 and 120mm

Waterlily and Collerette Dahlia Collections - Our Choice
Useful in herbaceous borders and for general planting. The Waterlily types make excellent cut flowers whilst the Collerettes are extremely free flowering and are particularly good for attracting butterflies and bees into the garden. Both types can be 'stopped' when 4-5 pairs of leaves have developed and all the resulting stems allowed to flower. Disbudding of these is only necessary if growing for exhibition or if they are needed for cutting.

Waterlily Dahlias

Attractive fully double saucer shaped flowers that are very useful as a cut flower and for garden display. Increasingly popular for exhibition where the depth of the flowers should ideally be no more than half the diameter. Waterlily varieties can be expected to flower with blooms between 100 and 150mm (4-6").

Our Choice Collections of Ball and Pompon Flowered Dahlias

Pompons are dainty flowers that only reach about 50mm (2") across. Ball Dahlias have flowers up to 150mm (6") across. Both types can be stopped when 5-7 pairs of leaves have developed and all the resulting stems left to flower. Disbudding is only necessary if growing for exhibition or for cut flowers, as this gives longer stems.

		MIDI PLANT
SMB5	5 Distinct Small & Miniature Ball	£24.75
SMB10	5 Pairs Distinct Small & Miniature Ball	£46.50

BPOM5	5 Distinct Small & Miniature Ball & Pompon	£24.75
BPOM10	5 Pairs Distinct Small & Miniature Ball & Pompon	£46.50

Pompon Dahlias

Flowers of these varieties have a round honeycomb formation and are often described as golf balls on sticks! The large Pompons are very useful as cutflowers. Blooms are approximately 50mm (2") for the true Pompons, with the large Pompon flowering between 50-75mm (2-3"). Maximum bloom size for exhibition is 55mm and 83mm for Pompons and Large Pompons respectively.

Midi Plant £5.50

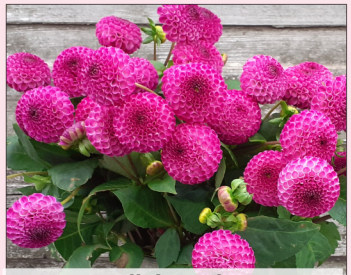
Ryecroft Blackberry (L)
Dark red to burnt orange. 1.2m. C E G. 2016
Midi Plant £5.85

Small World
White. 1.1m. AGM. E G. 1967
Midi Plant £5.50

Willo's Borealis
Lavender. 1.1m. E. 1978
Midi Plant £5.50



Willo's Violet
Violet with white base. 1.1m. E G. 1937
Midi Plant £5.50

Winkie Lambrusco
Vibrant orange-red. 1.5m. C E G. 2013
Midi Plant £5.50

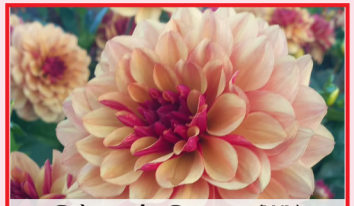
Dwarf Bedding Dahlias

The following varieties grow into shorter, more compact plants which can be grown at the front of the border or in pots, minimum size 30-40cm. In more exposed areas it may still be advisable to provide some support, particularly when growing in pots. When choosing the size of container please bear in mind stability, opting for a shorter, wider type as opposed to tall and narrow. Varieties marked PP are particularly suitable for pot culture.

Art Deco (U Double Orchid)
Bronze with copper reverse. 30-40cm. AGM. PP 1994
Midi Plant £5.50

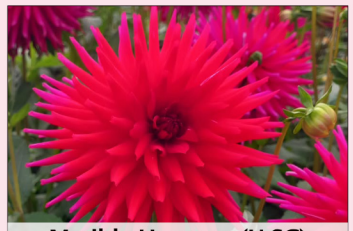
Art Nouveau (U Double Orchid)
Pink with purple reverse. 30-40cm. AGM. PP. 1998
Midi Plant £5.50

Crème de Cassis (WL)
Pale lilac with purple reverse. 60cm. G. PP. 2014
Midi Plant £5.50



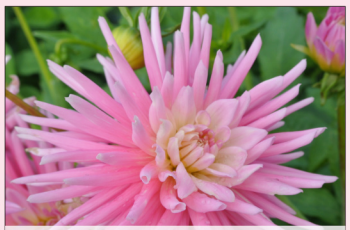
Crème de Cognac (WL)
NEW Orange with darker reverse. 60cm. G. PP
Midi Plant £5.50

Hadrian's Glowing Embers (Single) Orange. Dark foliage. 90cm. 2020
Midi Plant £5.50



Matilda Houston (U SC)
Red. 60cm. 1978
Midi Plant £5.50

Moonfire (Single)
Orange with red centre. 60cm. AGM. 1998
Midi Plant £5.50



Park Princess (U SC)
Pale pink with white centre. 60cm. 1959
Midi Plant £5.50

Preston Park (U Single)
Red. 30cm. AGM. 1969
Midi Plant £5.50

Spanish Conquest (U MinD)
Orange with bronze reverse. 45cm. PP 2008
Midi Plant £5.50

Yellow Hammer (U Single)
Yellow. 45cm. AGM. 1966
Midi Plant £5.50

Bedding Dahlia Collections - Our Choice

Compact and free flowering varieties which are suitable for the front of the border or for growing in pots and containers. Feed regularly and remove dead and faded flowers to prolong flowering.

		MIDI PLANT
BDP5	5 Distinct Bedding & Patio	£24.75
BDP10	5 Pairs Distinct Bedding & Patio	£46.50

CHRYSANTHEMUMS

Chrysanthemums are supplied as strong rooted cuttings, grown in individual cells (approx. 3x3x6cm) ready for potting into at least a 9cm pot on receipt prior to planting out or moving on into a larger pot. They are available from Mid-March to Mid May with suggested earliest delivery times for the facilities available indicated below.

Facilities Available	Southern England	Midlands	Northern England	Scotland
Heated Greenhouse	Mid-March			
Cold Greenhouse	Early April			
Cold Frame	Early April			
No Protection	End April	Early May		

Please indicate clearly on the order form when plants are required, bearing in mind than a minimum of 5 weeks notice is required as cuttings are taken to order.

Chrysanthemum cuttings

Chrysanthemum order ready for packing

Chrysanthemum Culture

Chrysanthemums do best in an open, sunny position in well-drained soil. Although not particularly fussy, careful attention to detail is required to produce good quality blooms and sprays, especially for exhibition. On receipt, plants should be potted into 9-12cm (4-5") pots or planted into boxes, placed under glass and gradually hardened off before planting. Apply a good balanced fertiliser to the planting beds at the rate of 75-100g (3-4oz) per square metre about 2 weeks prior to planting, which should not be carried out until mid-end April in the southern counties and not before mid-May in the Midlands, North and Scotland. Plant firmly, about 45cm (18") apart, tying the plants to the canes immediately, taking care not to damage the roots. Check watering carefully, especially with young plants, as overwatering can be fatal. Plants will benefit from liquid feeding after a few weeks using a balanced feed in the early stages and switching to a higher potash feed as buds develop. This will help intensify flower colour, strengthen stems and overall increase bloom quality and resilience. Keep a careful check on the plants at all stages to avoid any pest or disease outbreaks, taking remedial action where necessary.

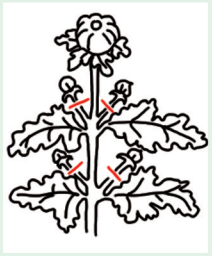
"Stopping" Your Chrysanthemums

When the plants are growing strongly, pinch out the growing tip. This process of "stopping" is carried out on blooms and spray varieties and encourages the earlier production of side shoots, which will in turn bear flowers. Seasoned growers will know and adapt the timing of stopping to the varieties they have and the show date they are aiming for. Adhering to specific stopping dates is much less critical when growing for pleasure and plants can be safely pinched out when they are 15-20cm high.

To achieve bigger and better blooms, some of the side-shoots that develop after "stopping" can be removed to leave 3-5 per plant. For spray Chrysanthemums and blooms for garden use, as many as eight side shoots can be supported but flower size will be smaller. At this stage, spray Chrysanthemums can be left to develop naturally.

Most Chrysanthemums flower on a single stop and flower on what is termed the 1st crown bud, but later flowering varieties are generally given a second stop about mid June- mid-July and flower best on what we would term the 2nd crown bud. This gives the plant a longer growing season, a bigger root system and therefore generally better flowers. Please note: depending on when your order is received and the period you have requested delivery, some varieties may flower much later than expected.

Disbudding



To ensure Chrysanthemum bloom varieties produce good sized flowers on long stems, it is necessary to secure the main flower bud by "disbudding". This is done by carefully removing the growth that appears in the leaf axils and leaving only the main bud on each flowering stem.

Although disbudding is not necessary on spray varieties it is a different matter if you are growing for exhibition. In this case only 5 or 6 buds should be allowed to develop at the top of each stem, selecting them for evenness in height, development and spacing with the aim of having as even a head of flowers as possible.

Cutting Your Blooms

It is advisable to cut flowers either in the morning or early evening to avoid hot sunny conditions making sure the plants have been well watered within the last 24 hours.

Overwintering

At the end of the flowering season, the plants can be cut back to 25cm, the roots trimmed, and the plants boxed up into trays ensuring they are carefully labelled. The Chrysanthemums need a period of cold after which they can be moved into a warmer environment where they will come into growth giving a source of propagating material that can be used for producing your own plants for the coming season.

Information regarding common pests and diseases can be found on the inside back cover.

Cultural Guides

A more detailed growing guide can be found on our website at **www.hallsofheddon.co.uk**

Alternatively hard copies can be supplied by post at a cost of 50p each by ticking the relevant box on the order form.

Chrysanthemum Collections

As mentioned on page 2, we are now only offering Chrysanthemums as "Our Choice" collections, details of which you will find on the following pages. All collections will be supplied in as wide a colour range as possible, with each variety accompanied by a label detailing colour and approximate height. Pictures shown are for representation only and not necessarily indicative of the varieties that will be included.

Collection of Outdoor Blooms for Garden and Cutting - Our Choice
Our choice of easy to grow cut flower and garden varieties chosen for their ability to flower well outside without the need for protection. After pinching out the growing tip allow 4-5 flowering stems to develop on each plant. Remove all but the terminal flower bud to achieve better quality and give good stem length for cutting. Generally flowering from the end of August onwards depending on variety. All growing between 1 and 1.4m.

G5	5 different varieties, 1 plant of each	**£22.50**
G10	5 different varieties, 2 plants of each	**£39.50**

Collection of Early Exhibition Blooms - Our Choice
Our choice of good and reliable varieties including Incurve, Reflex and Intermediate varieties chosen for their exhibition quality. Generally flowering from the end of August onwards depending on variety. Collections may include 'Early' and 'Mid-Season' varieties as many of these are shown at early shows.

E5	5 different varieties, 1 plant of each	**£22.50**
E10	5 different varieties, 2 plants of each	**£39.50**

Collection of Assorted Greenhouse Blooms - Our Choice
Our selection from across the full range of greenhouse flowering Chrysanthemums which will flower from October to December depending on variety. Plants can be grown outside in 20-25cm pots during the summer months and brought into the greenhouse to flower just before the buds start to show colour.

AS5	5 different varieties, 1 plant of each	**£22.50**
AS10	5 different varieties, 2 plants of each	**£39.50**

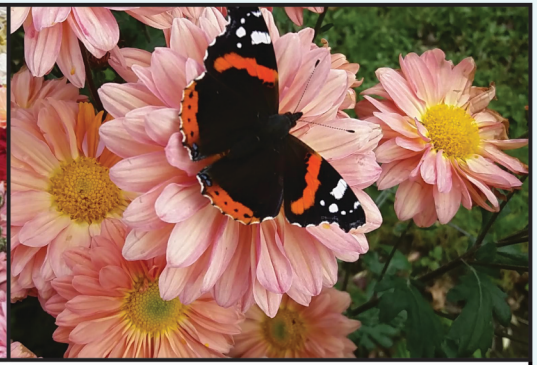
Collections of December and Christmas Flowering Blooms - Our Choice
Specially selected from the later flowering Chrysanthemums to give flowers from the end of November through to the end of December. Includes both Intermediate and Reflexing types. Plant in pots in the greenhouse from April onwards and move outside from May. For use as cut flowers they can be stopped at the end of July and brought back into the greenhouse in September for flowering later in the year.

D5	5 different varieties, 1 plant of each	**£22.50**
D10	5 different varieties, 2 plants of each	**£39.50**

THE NATIONAL CHRYSANTHEMUM SOCIETY

Memberships include
2 High quality publications per year
Winter lectures by Zoom
Access to advice from our experts
Access to the NCS video archive
Discounted entry to the Harrogate Flower show at Newby Hall
email: **enquiries@chrysanthemum-ncs.org**
or by telephone 01270 820 911

As a registered charity, our stated purpose is: To enhance the social, physical & mental well being of individuals & communities by promoting the growing and showing of Chrysanthemums



Collection of Spray Chrysanthemums - Our Choice
Our choice of spray chrysanthemum varieties in a good colour range. Ideal for cutting and adding late summer colour to the mixed border. After removing the growing tip (stopping) allow 4-5 stems to develop for flowering from August to October. No disbudding is required.

Choose to have the collections below either as all double varieties (M), all single varieties (SGL) or a mixture of both (S) using the appropriate letter in front when ordering, eg M10 or S5.

5	5 different spray varieties, 1 plant of each	**£22.50**
10	5 different spray varieties, 2 plants of each	**£39.50**

Collection of Hardy Chrysanthemums - Our Choice
Our choice collection of Korean and Rubellum varieties flowering from August to November. These should be able to be safely left in the garden from year to year as long as the ground is well drained. Ideally suited for planting in mixed borders to extend the flowering season.

KR5	5 different varieties, 1 plant of each	**£22.50**
KR10	5 different varieties, 2 plants of each	**£39.50**

Pests and Diseases

The following are problems you might encounter on both Chrysanthemums and Dahlias. Strong, healthy growing plants are less likely to have issues so we cannot over emphasise the importance of providing good growing conditions for your plants as being the starting point in minimising pest and disease problems. Vigilance and good hygiene throughout the growing season and taking remedial action as soon as a problem is detected will help to ensure the impact to any of the following is minimal.

Aphids/Greenfly cause distortion of the foliage and are one of the main causes of spreading viral diseases.

Blackfly/Melon Cotton Aphid – a more difficult to control member of the aphid family which is more common in the greenhouse.

Capsid Bug -causes distortion of the growing tip by puncturing plant tissues which results in mottling and ragged looking leaves and occasionally distorted flower buds. Often the damage is only seen long after the pest has been present.

Earwigs- leaves and/or petals eaten in an irregular pattern, sometimes with the appearance of being shredded. Seal cane ends with cane caps, or putty. Vaseline on stems will prevent earwigs from getting into blooms.

Thrips- cause a puckering of the foliage and bronzing of the growing tips and can badly mark the flowers, particularly pinks and whites. The yellow or preferably blue sticky traps available for use in greenhouses can help monitor a potential problem.

Powdery Mildew – associated with dryer weather and appears as a white powdery coating on the surface of the leaf.

Virus – Plants, which show a severe mottling of the leaves with yellowing of the veins and an obvious stunting in the growth, may well be infected with virus. Such plants are best removed and destroyed and certainly should not be used for propagation.

Slugs and Snails – young plants in particular can be quickly decimated, especially in damp weather. Various control methods available.

White Rust Affects Chrysanthemums only. Pale yellow green spotting on the upper surface of the leaf is followed by yellowish brown/white pustules on the underside. Remove and burn affected leaves as soon as possible being careful not to handle unaffected plants. Spores need moisture to germinate and spread, so keep the humidity and the foliage dry, ensuring plants are well spaced for adequate ventilation. Good hygiene is important at the end of the season. See cultural notes on page 37 for details.

Leafy Gall- is a disease caused by the bacterium *Rhodococcus fascians*, which enters the plant through wounds in roots or stems and stimulates the plant tissues to grow in a disorganised way, producing dense clusters of distorted, leafy shoots. Good hygiene is the best action to prevent spread.
It can be often confused with similar symptoms produced by physical damage to the plant- eg slug and snail damage to growing shoots.

Dahlia Smut – pale yellow spotting of the lower leaves which slowly develop into brown spots, which dry up and fall out! This is more prevalent in wet seasons and it is advisable to rotate planting where there is a known problem.

PLEASE NOTE - No chemical names have been mentioned as these are constantly under review. Please seek advice from you local garden centre or nursery for the best products currently available. Always use pesticides and fungicides safely and do not exceed recommended dosage rates.

AN INVITATION

Each year we welcome many visitors to our West Heddon Nursery to view our Dahlia and Chrysanthemum fields, planted with more than 8,000 plants (aprroximately 245 varieties of Dahlias plus 60 varieties of Chrysanthemums). There is also a chance to see our Trial Beds, where new varieties from amateur breeders are assessed for performance and possibe introduction to our list in future years.

Don't forget our Nurseries are open all year round with an extensive range of garden plants available, many being home grown. A good range of composts and garden sundries are also stocked along with seeds and bulbs (in season).

At our Ovington Nursery you can enjoy browsing through the herbaceous borders in a pleasant setting with superb views over Tyne Valley. A wide range of home grown plants are available all year round.

Opening Times

Nursery: Mon-Sat 9am-5pm
Sun 10am-5pm
Office: Mon-Fri 9am-5pm
(Closed Weekends)

Our Nurseries and Office are closed between Christmas and New Year
