CHRYSANTHEMUM & DAHLIA CATALOGUE SEASON 2026

New for 2026 Xanthic Zoe (uSSC) pg 28

New for 2026 Malaga (uMinD) pg 25

Fields at our Heddon Nursery

All grown and produced in Northumberland

Dear Friends and Fellow enthusiasts,

Welcome to this, the latest edition of our Dahlia and Chrysanthemum catalogue for the 2026 season. Can I first of all say a very big thank you to all of you who have entrusted us with their orders over many years. We hope you have been rewarded with colourful displays and quality blooms in what has been a very difficult season for many, including ourselves. One thing we have learnt over our 100 plus years is that no two seasons are the same with last year being a very wet and cool summer, and this year an extremely hot and dry one. Fortunately, the fields came good in the end, and we enjoyed spectacular displays throughout September and, incredibly, the displays only suffered minor damage in the recent Storm Amy. We have welcomed visitors to our fields from all over the UK, as well as from France, Holland, Belgium, Ireland and the USA, all of whom were full of enthusiasm for the colourful sight that greeted them. Even on cloudy, wet and miserable days, Dahlias can always bring a smile!

As a trial this year, we ran a few introductory talks and Q and A sessions. These were free to attend, though we did invite donations to be made for the Great North Air Ambulance Service. These were gratefully received with over £400 raised so far with more coming in as people continue to enjoy the fields and wish to show their appreciation. Weekend talks are something I would like to do again next year as part of a "Dahlia Festival" with advance notice being posted on our website and social media pages.

You will note that the publication of this catalogue is later than usual, mainly due to delayed flowering in a number of varieties, and, as you know, we need to make sure all stock is thoroughly checked and assessed before inclusion in the catalogue. We won't be re-introducing our online shop for this season although we are intending to update our website to offer as much information as we can. This all takes time and, as a small team, this is something we seem to have been extremely short of this year.

TOO MUCH CHOICE? WHY NOT LEAVE IT TO US AND SAVE WITH OUR **SPECIAL COLLECTIONS OF DAHLIAS AND CHRYSANTHEMUMS**

Featured throughout this catalogue, these come at great savings compared with buying individually priced plants and are an easy way to order, especially if you are not sure what to choose. Each collection is supplied in as wide a colour range as possible for the classifications covered, with all varieties being labelled for your convenience.

We only have two new introductions this year with a few varieties withdrawn for this season. though we do hope to have some of these back for 2027.

"Malaga" (p25) is a new, but yet unclassified Miniature Decorative Dahlia from Tom Cleghorn, with a lovely blend of apricot and orange flowers on good strong stems growing to approx. 1.2m. With weatherproof blooms, this is a particularly good variety for cutting and garden display, though it could also prove to be a useful variety for the show bench.

"Xanthic Zoe" (p28) is a bright yellow sport from "Greenways Zoe", selected and secured by Kathleen and Neil Horton. Like "Greenways Zoe" and the original "Ryecroft Zoe", it grows to about 1.2m and is a prolific bloomer with excellent show bench quality. It does ideally need plenty of blooms to develop on the plants to help keep the size down when showing, so we would suggest growing 12-14 up!

As we head rapidly towards the end of this season, we are starting to prepare for the next, with new ideas to be developed and one or two changes to implement. What will not change is our commitment to provide quality plants for you to grow and enjoy, something which our team take great pride in, ensuring your plants reach you in tip top condition ready for you to pot up and grow on. Inevitably things don't always go quite according to plan, despite our best efforts, and we must thank you for your patience and understanding when some delays in despatch and order fulfilment occasionally happen.

We are here to help and advise you on how to get the best from your plants and have once again included brief Cultural Guides to help those new to growing. We are only a phone call or an email away should you need further information, please allow us a few days to respond, particularly at the busiest times of the year.

With best wishes for the coming season and a big thank-you to you and our team.

David Hall and all the team at Halls of Heddon

GENERAL TERMS AND CONDITIONS

PLEASE READ CAREFULLY BEFORE ORDERING

THIS CATALOGUE CANCELS ALL PREVIOUS CATALOGUES WITH PRICES
REMAINING VALID UNTIL 30TH JUNE 2026*

HOW TO ORDER AND PAY

- Minimum order value £10.00 excluding carriage and packing.
- Fill out and return the enclosed order form to W.N.Hall & Sons Ltd (T/A Halls of Heddon), West Heddon Nursery, Heddon on the Wall, Northumberland, NE15 0JS.
- Payment required with order
- Please make cheques payable to **W N Hall & Sons Ltd.**
- Credit/Debit cards will be charged on placing your order.
- Please note - we will not be reopening our online shop this season
- If required, we can ring you for payment details once your order is booked, or we can send a secure payment link.
- Regretfully any cheques returned unpaid will incur a £15.00 charge.

ORDER DEADLINES

Early ordering enables us to plan our production more efficiently so please place your order a minimum of 5 weeks before your requested date. Orders after the 22nd March can only be accepted on a "substitutes acceptable" basis unless they are for our special collections.

We will make every effort to supply plants during the period requested but delays may occur in periods of high demand.

ACKNOWLEDGEMENT

All orders will be acknowledged and an order number given. This should be retained until the order is completed and quoted in the event of any correspondence. Your acknowledgement will also give an estimated delivery period based on the information you provide on the order form.

Please check that we have your details recorded correctly to ensure you receive your plants safely.

SUBSTITUTES

We reserve the right to substitute a similar alternative in the event a variety is unavailable at the time of despatch, unless specified as 'No Substitutes' on the order form. We will always try to match the variety as closely as possible. Please indicate whether flower colour OR variety classification is the priority for substitute choice. Orders where 'No Substitutes' is selected may result in delayed despatch or incomplete orders, with varieties to follow at a later date.

Abbreviations used throughout the Catalogue

C	Good for cut flower	AM/E	Award of Merit for Exhibition
E	Suitable for exhibition	PC	Preliminary Commendation
G	Good for Garden Display	PD	Preliminary Diploma
AGM	Award of Garden Merit	U	Variety not classified
CEM	Certificate of Exhibition Merit	SR	Sole release variety

CARRIAGE & PACKING DETAILS

All prices are per order, regardless of quantity of tubers or plants.

Dahlia Pot Tubers £7.95. Sent 2nd class Royal Mail

Dahlia Mini Plants and Chrysanthemums £7.95. Sent 1st class Royal Mail.

Garden Ready Dahlias £10. UK Mainland only. Sent 1st class Royal Mail.

Please note: Any order for plants requiring different delivery periods eg. Pot Tubers and Mini Plants, will be treated as separate orders and an additional carriage charge will apply.

We may occasionally use a courier service at our discretion. Please provide a mobile number and/or email address on your order for delivery notifications.

It may take 2-3 days for delivery to more remote areas.

Minimum order value £10 (excluding C&P)

COLLECTION OF ORDERS AND PERSONAL CALLERS

You can opt to collect your order from our West Heddon Nursery and in this case we will advise you by post, telephone or email when your plants are ready to pick up. We will have a range of Chrysanthemums and Dahlias available in our West Heddon Nursery shop from April and May respectively.

NORTHERN IRELAND, EU and WORLDWIDE CUSTOMERS

It is no longer viable for us to accept and process orders to these destinations due to the Windsor Framework and the NIPHL scheme, as well as the additional requirements for exporting to the EU and Worldwide as a whole.

DELIVERY TIMES

We would suggest using the table on page 6 for Dahlias and 34 for Chrysanthemums to help you determine the best time to receive your plants based on the facilities you have available. Please indicate this when placing your order.

GUARANTEE

All green plants are despatched by first class post or next day courier service to ensure you receive them in the best possible condition. Please contact us immediately if any plants fail to satisfy on arrival. We will replace or refund the full cost of the plants providing they are returned to us within seven days. For pot tubers please see the relevant sections under Dahlias (p6).

PRIVACY POLICY

You have received this catalogue as you have ordered from us in the last 3 years or requested to be added to our mailing list. Your personal information will not be passed on to third parties. We will however retain your details for the purpose of communicating with you about your order and for our own marketing purposes. We will automatically send you our Catalogue for three years following an order unless you opt out. You can opt out at the time of ordering or by contacting us using the details on the back cover. All information is collected lawfully and in accordance with the General Data Protection Regulations 2018. Full details of this policy are available on our website.

DAHLIAS

The range of Dahlias we offer includes some of the finest varieties available. Grown and propagated from our own stock, we are able to fully assess their performance throughout the flowering season for trueness to type, health and vigour.

We offer Dahlias for sale in 3 forms (See image on page 17)

Dahlia Pot Tubers Available from December to February

Compact tubers grown in a 9cm pot. Ideal for exhibitors or keen growers with the facilities to produce and propagate their own stock. Early ordering is advisable. The most up to date availability will be shown online. If not using for cutting production we would strongly advise ordering either Mini Plants or Garden Ready.

SPECIAL NOTE Any tuber which fails to grow should be returned to us by March 31st. A replacement tuber can be sent if available, or alternatively we can replace with mini plants, issue a credit note or offer a refund.

Dahlia Mini Plants Available from 23rd March- End May

Supplied as strong rooted cuttings for potting up and growing on under glass (Minimum 10°C, 50°F). On receipt, they should be unpacked immediately and potted on into a 9-12cm pot using a good quality compost.

Garden Ready Dahlias We aim to despatch all orders between 2nd and 20th June.

Delivery to Mainland UK only

These are Mini Plants potted up into 8cm biodegradable wood pulp pots and grown on by ourselves for 2-3 weeks to make larger plants prior to despatch. After a couple of days to acclimatise these are ready for planting directly into the garden, making them ideal for customers with no facilities for growing on.

These come at an additional cost of £3.50 per plant and have a carriage and packing fee of £10 per order.

Orders for Mini Plants and Garden Ready Dahlias, other than our 'Our Choice' collections must be received before April 1st. Beyond this any orders will only be accepted on a 'Substitutes acceptable' basis.

Delivery Times

We would suggest using the table below to help you determine the best time to receive your plants according to the facilities you have available for growing. Please indicate this when placing your order.

Facilities Available	Southern England	Midlands	Northern England	Scotland
Heated Greenhouse	End of March			
Cold Greenhouse	Mid April	Mid-End April	End April - Mid May	Early-Mid May
Cold Frame	Early May	Mid May	End May	End May
No Protection	Mid-End May	End May	End May*	End May*

*Frost Protection may still be needed, alternatively Garden Ready Plants are available early June

Dahlia Quantity Discounts - Apply when 3 or more of the SAME variety of mini plant are ordered

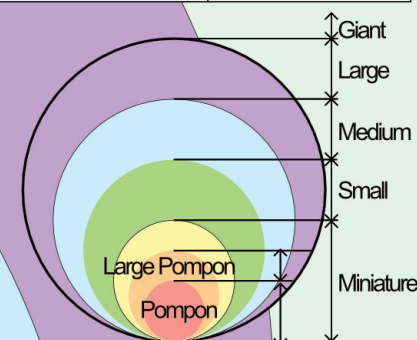

Each Rate	£4.65	£4.95	£5.50	£7.50
3-4 Plants	£4.40	£4.70	£5.25	£6.70
5-9 Plants	£4.25	£4.55	£5.10	£6.55
10+ Plants	£4.10	£4.40	£4.95	£6.40

Classification - Size and Form

Varieties in our catalogue are divided into categories according to bloom size and formation as per the 36th Edition of the National Dahlia Society's Classified Directory. Where a variety is not classified, it is marked with a 'U' and included in what we believe to be the most appropriate section after trial at the nursery, or from historical information.

The rings on this page offer an indication of typical bloom size for each category with a scale key on the right. This key is also shown throughout the Dahlia section of the catalogue.

The drawings below give a representation of the different forms of Dahlias offered. Miscellaneous Dahlias don't fit into the categories below.

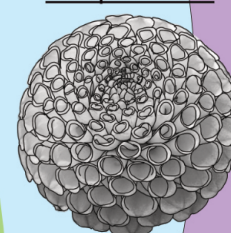

Single Dahlia

Waterlily Dahlia

Pompon Dahlia

Fimbriated Dahlia

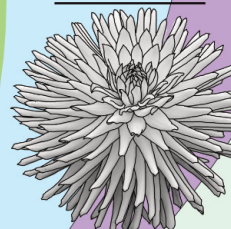

Anemone Dahlia

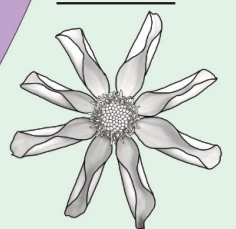

Decorative Dahlia

Cactus Dahlia

Star Dahlia

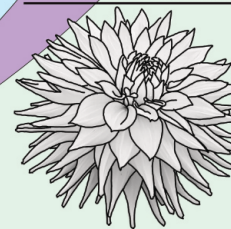

Collerette Dahlia

Ball Dahlia

Semi Cactus Dahlia

Paeony Dahlia

Dahlia Culture

To perform at their best, Dahlias need an open sunny position with a well-drained, fertile soil, whilst at the same time needing plenty of water. Ideally, land for Dahlias should be well dug and manured in the autumn and a complete fertiliser applied at the rate of 75-100g (3-4oz) per square metre, about 2 weeks before planting. Purchasing pot tubers gives you the option of setting these away early in the season so that you can take your own cuttings to plant out when it is safe to do so. If you are not intending to use pot tubers for this purpose, then we would suggest opting for our Mini or Garden Ready Plants which will reward you with a great display of flowers from late summer and through autumn until the first frosts. The tubers they will produce can then be used the following season, either for taking your own cuttings from, or dividing and planting out. If you have the facility of a heated greenhouse, you can take delivery of Mini Plants from the end of March onwards. On receipt, plants should be potted on into 9-12cm pots using a reliable compost, taking care to shade from direct sun for the first few days and not over water. Cuttings potted in April may need potting on again to keep the plants growing strongly prior to planting out from the end of May in southern counties or early to mid-June in the Midlands, North and Scotland.

Planting Out and Stopping

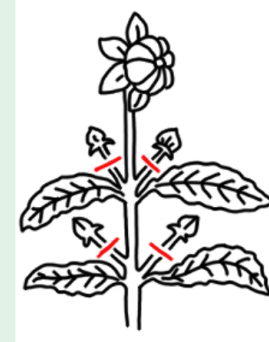

Plant firmly and stake and tie in at once. If you are growing for exhibition, then giant, large and medium flowered varieties are best planted in a two row bed 60x60cm (24x24") apart with a space of about 1.2m (4') between beds. The suggested spacing for small and miniature flowered Dahlias is about 50x50cm (20x20") and again about 1m between beds. To encourage the development of flowering stems, your plants should be 'stopped' by taking out the growing tip. This is usually done early to mid-June, although naturally later flowering varieties should be stopped earlier. Generally, giants and large should be stopped at 2 to 3 pairs of leaves, mediums at 3-4 pairs, and smalls, miniatures and pompons at 4-5 pairs of leaves from the base of the plant. Adopting this method should help produce sufficient stems on each plant from which the required number of blooms can be grown, ie: giants 3 to 4; large 4 to 5; mediums 6 to 8; and smalls and miniatures 8-12, though some thinning out and removal of stems may be required to help control flowering size. Too many blooms on a plant, particularly of the larger flowered varieties, will result in smaller flowers. In some cases, miniature flowered varieties will need a double stop, though this is only relevant when growing for showing.

Growing On and Feeding

Be sure to keep your plants well-watered during hot, dry conditions, preferably in the evening, but be particularly careful not to overwater! A few weeks after planting, you can start applying additional fertiliser, either as a top dressing, or more easily as a liquid feed. In the early part of the season, from June through to July, a high nitrogen feed could be applied, which will help promote healthy leaf and stem growth. From August onwards switch to a high potash fertiliser such as Vitax Dahlia Feed or even Tomato food. The higher levels of potash will help with flower colour, stem strength and root growth.

Disbudding to produce long stemmed quality blooms should commence as soon as shoots develop in the leaf axils. As a general guide, the first 2-3 pairs of buds or growths below the terminal bud should be carefully removed, more for giant and large flowered varieties. Keep a careful check on plants at all stages to avoid any pest or disease outbreaks taking remedial action where necessary.

Dahlias for Garden Display

A brilliant display for the border right up until late Autumn can be achieved using all the above recommendations with just a few amendments. For spacing allow 50-60cm (20-24") between all varieties, except bedders where 30-40cm (12-15") is ideal. There isn't any need to disbud, though this will not harm the plants and would give better length stems for cutting for the house. Regular removal of old flowers will help promote a longer flowering season and keep plants looking at their best.

Lifting and Storage

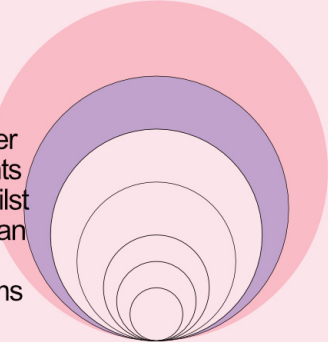

Never rush to lift your Dahlia tubers as, unless the weather conditions are particularly cold or wet, they will be fine in the ground. We always aim to have all ours lifted by about Mid-November, as long as the weather remains open, and ground conditions are not getting too wet. Dahlias should be carefully lifted, all fibrous roots removed, and stems cut down to within about 10cm (4") of the tubers. Be careful to label each tuber as you lift them, discarding any which have produced shallow (daisy eyed) flowers or show signs of mottled foliage or stunted growth, as this could be sign of virus. The tubers should be carefully dried before being stored in a frost proof place until required for propagation or planting out the following season making sure they are checked occasionally for excessive drying out or storage rot. If you have well drained soil and live in the southern half of the country you may find you can leave the tubers in with some success. As a precaution pile some straw, bracken or spent compost on top to act as a mulch and give added insulation.

Information regarding common pests and diseases can be found on the inside back cover.

A more detailed version of our cultural guides can be found online or can be requested by ticking the box on the order form.

Giant and Large Decorative Dahlias

These supersized flowers will certainly create the wow factor either in the garden or on the show bench. To achieve full potential Giants should generally be restricted to 2-3 flowering stems per plant whilst Large should be restricted to 4-5. Blooms of the 'Giant' varieties can reach over 250mm (10") with 'Large' blooms between 200 and 250mm (8-10"). Maximum bloom size for exhibition of large blooms is 260mm.

Collections of Medium Flowered Dahlias - Our Choice

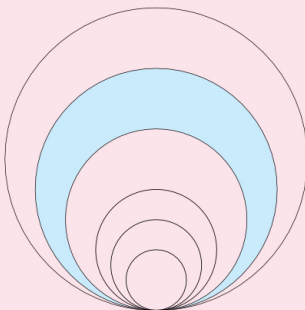

Although described as mediums, these varieties will still easily produce blooms between 150-210mm (6-8") with a little bit of care and attention. For best results, allow 6-8 flowering stems to develop on each plant after pinching out at 4 pairs of leaves.

Orders being prepared for despatch

Our Dahlias are offered in the following forms during the periods indicated below.

Pot Tubers (for propagation) from December to February.

Mini Plants (the most popular choice) from End March to End May

Garden Ready (for those with no frost protection) in early June

See terms page 6

Pot Tuber

Mini Plant

Garden Ready

Medium Fimbriated Dahlias

Good sized flowers can be achieved by allowing 6-8 blooms on each plant. The fimbriated varieties have evenly split or notched petals. Blooms of Medium varieties can be expected to be between 150 and 200mm (6-8"). Maximum bloom size for Exhibition is 220mm.

Normandie Wedding Day Stunning blush pink. 1.2m. C E G. Mini £4.95 Pot Tuber £10.95

Terrie Bandy (U) Bright orange. Late flowering. 1.4m. C E G. Mini £4.65 Pot Tuber £9.95

Citron de Cap (U) Yellow with pale pink tinge. 1.4m. C E G. Mini £4.65 Pot Tuber £9.95

Miscellaneous Dahlias

Includes star, orchid, anemone centred and single flowered Dahlias. The open centred varieties included are excellent for attracting all types of pollinators. Being very free flowering they will provide a wonderful display of colour through summer and well into the Autumn. They are becoming increasingly popular because of this.

Blue Bayou (Anem) Lavender with purple centre. 1.2m. C G. Mini £4.65 Pot Tuber 9.95

Hadrian's Bubblegum (Single) Pink, dark foliage. 0.9m. G. Mini £4.65 Pot Tuber £9.95

Twynings After Eight (Single) White, dark foliage. 1.2m. G. Mini £4.95 Pot Tuber £9.95

Collerette Dahlias

Hugely attractive to all types of pollinators, the flowers have a single outer ring of generally flat petals (ray florets) with a ring of smaller petals (florets) forming a collar. They make an excellent addition to any garden, particularly herbaceous borders. Flowers are generally between 100 and 120mm

Teesbrooke Audrey Lilac pink with white collar. 1.1m. E G. Mini £4.65 Pot Tuber £9.95

Waterlily and Collerette Dahlia Collections - Our Choice

Useful in herbaceous borders and for general planting. The waterlily types make excellent cut flowers whilst the Collerettes are extremely free flowering and are particularly good for attracting butterflies and bees into the garden. Both types can be 'stopped' when 4-5 pairs of leaves have developed and all the resulting stems allowed to flower. Disbudding of these is only necessary if growing for exhibition or if they are needed for cutting.

		MINI PLANT	GARDEN READY
COLL5	5 Distinct Collerettes	£21.75	£39.25
COLL10	5 Pairs Distinct Collerettes	£41.50	£76.50
WAT5	5 Distinct Waterlilies	£21.75	£39.25
WAT10	5 Pairs Distinct Waterlilies	£41.50	£76.50
WATCOLL5	5 Distinct Waterlilies & Collerettes	£21.75	£39.25
WATCOLL10	5 Pairs Distinct Waterlilies & Collerettes	£41.50	£76.50

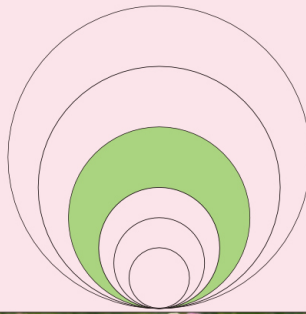

Pollinator Friendly Collections - Our Choice

A collection of open-centred varieties from the Collerette, Miscellaneous and Bedding Dahlias categories. These will attract a wide range of pollinating insects to the garden. These will also look good in the cottage garden border, being very free flowering over a long period.

		MINI PLANT	GARDEN READY
B5	5 Distinct Bee Friendly Varieties	£21.75	£39.25
B10	5 Pairs Distinct Bee Friendly Varieties	£41.50	£76.50

Waterlily Dahlias

Attractive fully double saucer shaped flowers that are very useful as a cut flower and for garden display. Increasingly popular for exhibition where the depth of the flowers should ideally be no more than half the diameter. Waterlily varieties can be expected to flower with blooms between 100 and 150mm (4-6").

Pompon Dahlias

Flowers of these varieties have a round honeycomb Formation and are often described as golf balls on sticks! The large Pompons are very useful as cutflowers. Blooms are approximately 50mm (2") for the true Pompons, with the large Pompon flowering between 50-75mm (2-3"). Maximum bloom size for exhibition is 55mm and 83mm for Pompons and Large Pompons respectively.

Our Choice Collections of Ball and Pompon Flowered Dahlias

Pompons are dainty flowers that only reach about 50mm (2") across. Ball Dahlias have flowers up to 150mm (6") across. Both types can be stopped when 5-7 pairs of leaves have developed and all the resulting stems left to flower. Disbudding is only necessary if growing for exhibition or for cut flowers, as this gives longer stems.

Dwarf Bedding Dahlias

The following varieties grow into shorter, more compact plants which can be grown at the front of the border or in pots, minimum size 30-40cm. In more exposed areas it may still be advisable to provide some support, particularly when growing in pots. When choosing the size of container please bear in mind stability, opting for a shorter, wider type as opposed to tall and narrow. Varieties marked PP are particularly suitable for pot culture.

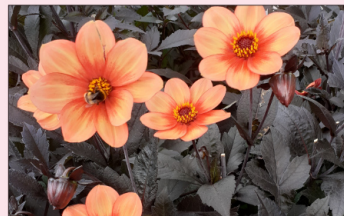

Art Deco (U Double Orchid) Bronze with copper reverse. 30-40cm. AGM. PP Mini £4.65

Art Nouveau (U Double Orchid) Pink with purple reverse. 30-40cm. AGM. PP. Mini £4.65

CHRYSANTHEMUMS

Chrysanthemums are supplied as strong rooted cuttings, grown in individual cells, ready for potting into at least a 9cm pot on receipt prior to planting out or moving on into a larger pot. They are available from the end of February to Mid May with suggested delivery times for the facilities available indicated below. Orders for other than our special collections must be received before March 22nd otherwise they will only be accepted on a "substitutes acceptable" basis. Please indicate clearly on the order form when plants are required, bearing in mind that a minimum of 5 weeks notice is required as cuttings are taken to order.

Chrysanthemum Quantity Discounts Apply when 3 or more of the SAME variety of plant are ordered

Each Rate	£4.45
3-4 Plants	£4.25
5-9 Plants	£4.00
10+ Plants	£3.75

Delivery Times

We would suggest using the table below to help you determine the best time to receive your plants according to the facilities you have available for growing. Please indicate this when placing your order.

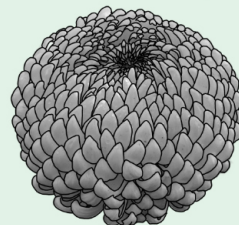

Facilities Available	Southern England	Midlands	Northern England	Scotland
Heated Greenhouse	February			
Cold Greenhouse	Mid March	End March	Early April	Early April
Cold Frame	Early April	Mid April	Mid-End April	End April
No Protection	Mid-End April	End April - Early May	Early - Mid May	Mid May

Classification

Varieties in our catalogue are divided into categories according to bloom type and flowering period as per the National Chrysanthemum Societies British National Register of Names of Chrysanthemums - Amalgamated Edition 1964-2022. Where a variety is not Classified, it is marked with a 'U' and included in what we believed to be the most appropriate section after trial at the nursery, or from historical information. The size of Chrysanthemum blooms is indicated by a letter within the classification code (a - large flowered, b - medium flowered, c - small flowered).

Incurve Bloom

The flowers in this group have a close and tightly formed petal (florete) arrangement which should form a perfect globe.
3- Late Flowering
13- October Flowering
23 - Early Flowering

Reflex Bloom

The flowers in this group have drooping petals which should reflex gracefully overlapping one another to create an umbrella effect.
4 - Late Flowering
14 - October Flowering
24 - Early Flowering

Intermediate Bloom

Similar to incurve but having a generally looser and more irregular formation.
5 - Late Flowering
15 - October Flowering
25 - Early Flowering

Single Spray

Flowers are open centred with multiple flowers on each stem.
19d - October Flowering
29d - Early Flowering

Double Spray

Multiple fully double flowers on each stem
19e - October Flowering Intermediate
29c - Early Flowering Reflexed
29d - Early Flowering Intermediate

Anemone Spray

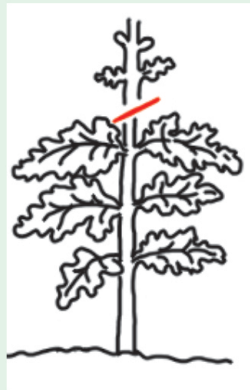

Open centred varieties with a pin cushion like central disc.
29a - Early Flowering

Chrysanthemum Culture

Chrysanthemums will perform better in an open, sunny position in well-drained soil. Although not a particularly fussy crop, careful attention to detail is required to produce good quality blooms and sprays, especially for exhibition. On receipt, plants should be potted into 9-12cm (4-5") pots or planted into boxes, placed under glass, and gradually hardened off before planting. A couple of weeks beforehand, a good balanced fertiliser should be applied to the planting beds at the rate of 75-100g (3-4oz) per square metre. Planting should not be carried out until mid-end April in the southern counties and not before mid-May in the Midlands, North and Scotland. Plant firmly, about 45cm (18") apart, tying the plants to the canes immediately, taking care not to damage the tender root hairs. Keep a careful check on watering, which is particularly important for young plants. Plants will benefit from liquid feeding after a few weeks using a more balanced feed in the early stages and then switching to a higher potash feed as buds develop. This will help intensify flower colour, strengthen stems and, to a degree, toughen up the blooms to make them more resistant to marking and damping off. Keep a careful check on the plants at all stages to avoid any pest or disease outbreaks, taking remedial action where necessary.

Stopping and Suggested Stopping Dates

When the plants are growing strongly, pinch out the growing tip. This process of "stopping" is carried out on blooms and spray varieties and encourages the earlier production of side shoots, which will in turn bear flowers. The timing of this is fairly critical when exhibiting as varieties vary in the length of time needed to produce the perfect bloom eg. the Courtier family would be stopped in the 2nd week of May in the North to have blooms at their peak for a mid-September show. For shows earlier than mid-September the stopping date would need to be brought forward. The serious exhibitor will keep their own records to assist in their timing for shows. To help, we have included suggested stopping dates for each variety for showing at early/mid September and early/mid November shows in the North East of England. They are intended as a guide only with adjustments being made for earlier or later show dates. Growers in the south of the country should delay suggested stopping dates due to longer day length, whilst those in Scotland should use as earlier date. As an extremely rough guide, delay stopping by 1 week for every 100 miles south of Newcastle and bring forward 1 week for every 100 miles north. These stopping dates become much less critical when growing for pleasure, with a delay in stopping only resulting in a corresponding delay in flowering and plants can be stopped when they are 15-20cm high. To achieve bigger and better blooms, some of the side-shoots (flowering stems) that develop after "stopping" can be removed to leave 3-5 per plant. For spray

Chrysanthemums and blooms for garden use, as many as eight side shoots can be supported but flower size will be smaller. At this stage, spray Chrysanthemums can be left to develop naturally. Most Chrysanthemums flower on a single stop and flower on what is termed the 1st crown bud, but later flowering varieties are generally given a second stop and flower best on the 2nd crown bud. This gives the plant a longer growing season, a bigger root system and therefore generally better flowers. Perfectly good results when growing for pleasure can be achieved on later delivered plants by just using the later date given for the second stop.

Please note: Depending on when your order is received and the period you have requested delivery, some of the suggested stopping dates may have been missed. Which may result in some varieties flowering later than indicated.

Disbudding

To ensure Chrysanthemum bloom varieties produce good sized flowers on long stems, it is necessary to secure the main flower bud by "disbudding". This can be done as soon as growth appears in the leaf axils by carefully removing these and leaving only the main bud on each flowering stem. Although disbudding is not necessary on spray varieties it is a different matter if you are growing for exhibition. In this case only 5 or 6 buds should be allowed to develop at the top of each stem, selecting them for evenness in height, development and spacing with the aim of having as even a head of flowers as possible.

Cutting Your Blooms

It is advisable to cut flowers either in the morning or early evening to avoid hot sunny conditions making sure the plants have been well watered within the last 24 hours.

Overwintering

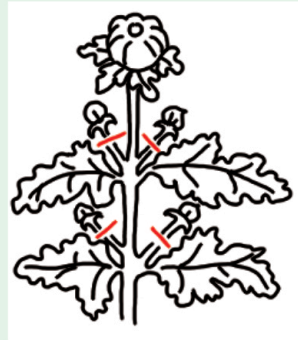

At the end of the flowering season, the plants can be cut back to 25cm, the roots trimmed, and the plants boxed up into trays ensuring they are carefully labelled. The Chrysanthemums need a period of cold after which they can be moved into a warmer environment where they will come into growth giving a source of propagating material that can be used for producing your own plants for the coming season.

Hot Water Treatment

Some growers will use hot water treatment between lifting and boxing up to ensure all stock for the following season starts off as clean and healthy as possible. After trimming back all green growth the dormant stools can be immersed in hot water at 45 degrees Celsius for a maximum of 5 minutes. Stools should then be immersed in cold water before planting up in clean trays, ensuring no cross contamination can take place.

Information regarding common pests and diseases can be found on the inside back cover.

A fuller version of our cultural guides can be found online or can be requested by ticking the box of the order form.

Early (September) Flowering Blooms

These will normally flower in September depending on cultural practices and stopping dates. We have included a suggested stopping date in brackets. See page 36 for how to adjust these dates to your location. After stopping, restrict the number of flowering stems on each plant to 3-5 stems.

Denotes varieties that will flower well in the garden without protection.

All varieties £4.45 each. For quantity discounts, see page 34.

Collection of Outdoor Blooms for Garden and Cutting - Our Choice

Our choice of easy to grow cut flower and garden varieties chosen for their ability to flower well outside without the need for protection. After pinching out the growing tip allow 4-5 flowering stems to develop on each plant. Remove all but the terminal flower bud to achieve better quality and give good stem length for cutting. Flowers from end August depending on stopping date. All growing between 1 and 1.4m.

G5	5 different varieties, 1 plant of each	£19.95
G10	5 different varieties, 2 plants of each	£38.50
G21	21 plants in a minimum of 7 varieties	£72.95

Collection of Early Exhibition Blooms - Our Choice

Our choice of good and reliable varieties including Incurve, Reflex and Intermediate varieties chosen for their exhibition quality. Flowers from end August to October depending on stopping dates. Collections may include 'Early' and 'Mid-Season' varieties as many of these are shown at early shows.

E5	5 different varieties, 1 plant of each	£19.95
E10	5 different varieties, 2 plants of each	£38.50
E21	21 plants in a minimum of 7 varieties	£72.95

Collection of Assorted Greenhouse Blooms - Our Choice

Our selection from across the full range of greenhouse flowering Chrysanthemums which will flower from October to December depending on variety. Plants can be grown outside in 20-25cm pots during the summer months and brought into the greenhouse to flower just before the buds start to show colour.

AS5	5 different varieties, 1 plant of each	£19.95
AS10	5 different varieties, 2 plants of each	£38.50
AS21	21 plants in a minimum of 7 varieties	£72.95

Cultural Guides

A brief guide to Chrysanthemums is given on pages 36-37. A more detailed growing guide can be found on our website at

www.hallsofheddon.co.uk

Alternatively hard copies can be supplied by post at a cost of 50p each by ticking the relevant box on the order form.

Collection of Cold Greenhouse Blooms - Our Choice

Supplied as a mixture of Incurves, Intermediates and Reflexes that all have one thing in common - they are all suitable for flowering in unheated greenhouses (depending on outside minimum temperatures) from mid October to mid November with plenty of ventilation. These can either be used for cut flower or exhibition and are best planted in pots so they can be grown outside through the summer months and then brought inside to flower once the buds have developed - generally by the end of September.

C5	5 different varieties, 1 plant of each	£19.95
C10	5 different varieties, 2 plants of each	£38.50

Collections of December and Christmas Flowering Blooms - Our Choice

Specially selected from the later flowering Chrysanthemums, on the following page, to give flowers from the end of November through to the end of December. Includes both Intermediate and Reflexing types. Plant in pots in the greenhouse from April onwards and move outside from May. For use as cut flowers they can be stopped at the end of July and brought back into the greenhouse in September for flowering later in the year.

D5	5 different varieties, 1 plant of each	£19.95
D10	5 different varieties, 2 plants of each	£38.50

Mid-Season (October) Flowering Blooms

These will generally flower in October depending on cultural practices and stopping dates. Suggested stopping dates have been given for September shows in red, and late shows in (). In some cases two dates are given in (), this indicates a variety best grown on a double stop and used for late shows. See page 36 for how to adjust these dates to your location. After stopping, restrict the number of flowering stems on each plant to 3-5 stems. Mid-Season varieties are often grown in pots, initially outside, and then brought into a cold greenhouse for flowering.
All varieties £4.45 each. For quantity discounts, see page 34.

As a registered charity, our stated purpose is:
 To enhance the social, physical & mental well being of individuals & communities by promoting the growing and showing of Chrysanthemums

Late Flowering Blooms for the Greenhouse

Flowering time is from late October through to November/December depending on the variety and stopping dates. Grown in pots, they can be moved from outside into the greenhouse just as buds break colour. These varieties are normally flowered on 2nd crown buds (stopped twice) with suggested stopping dates for flowering end of October - early November given in (), For exhibition purposes only 2-3 blooms should be allowed to develop on each plant. By delaying stopping from the dates indicated some varieties, marked December, will flower up to Christmas.

All varieties £4.45 each.

Balcombe Perfection (5b) Amber bronze. December. AM. 1.2m. (20/5 and 1/7)

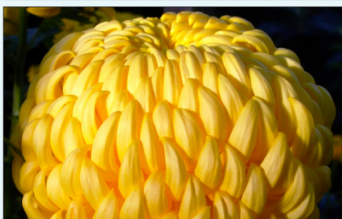

Bronze Cassandra (5b) Bronze. December. AGM. 1.2m. (20/5 and 5/7)

HARDY GARDEN CHRYSANTHEMUMS

(KOREAN AND RUBELLUMS)

Ideal for the herbaceous border, bringing an abundance of autumn colour, with some varieties flowering well into the winter. They are also an invaluable late season source of nectar and act as a magnet for bees and butterflies. The plants can grow quite bushy so need plenty of space but are often strong growing enough to support themselves. We have found them to be very hardy, surviving outside with no protection and flowering freely year after year, providing they are grown in a well drained soil. **All varieties £4.45 each.** For quantity discounts, see page 34.

Aunt Millicent (21d) Silvery pink. Oct-Nov. AGM. 60cm.

Dulwich Pink (U21d) Rich pink. Aug-Sept. 60-75cm.

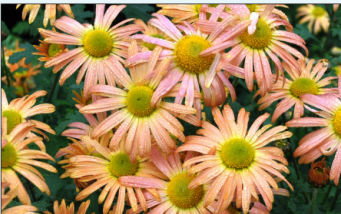

Emperor of China (21f) Late flowering pink. Oct-Nov. 90cm

Grandchild (21c) Pink. Aug-Sept. AGM. 45cm.

Mary (21f) Cream with partly quilled flowers. Sept. 65cm.

Mary Stoker (21d) Apricot yellow. Sept-Nov. 90cm

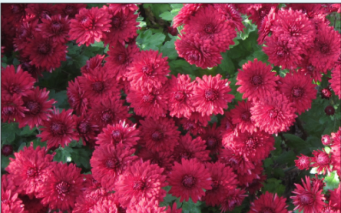

Mauve Gem (21f) Purple with semi quilled petals. Sept-Oct. AGM. 65cm

Nell Gwynn (21d) Pink. Sept-Oct. 45cm.

Perry's Peach (21d) Peach. Sept-Oct. AGM. 60cm

Ruby Mound (K 21c) Maroon-red. Sept-Oct. AGM. 60cm

Ruby Raynor (21c) Yellow. Sept-Oct. AGM. 60cm.

Sea Urchin (K 21f) Lemon yellow. Aug-Sept. AGM. 35cm.

Starlet (K 21f) Light bronze with spoon petals. Aug-Sept. AGM. 55cm.

Venus 1 (21d) Cerise pink. Flowers into November. Very hardy. 60cm.

White Gem (21f) White with 'spoon' petals. Sept-Oct. 50cm.

Collection of Hardy Garden Sprays - Our Choice

Our choice collection of Korean and Rubellum varieties flowering from August to November. These should be able to be safely left in the garden from year to year as long as the ground is well drained. Ideally suited for planting in mixed borders to extend the flowering season.

KR5	5 different varieties, 1 plant of each	£19.95
KR10	5 different varieties, 2 plants of each	£38.50
KR21	21 plants in a minimum of 7 varieties	£72.95

Collection of Charm and Cushion Mums - Our Choice

The following collections are our choice in a wide colour range and are ideally suited for the front of the border and for growing in pots where they will make an ideal autumn flowering patio plant.

GM5	5 different varieties, 1 plant of each	£19.95
GM10	5 different varieties, 2 plants of each	£38.50
GM21	21 plants in a minimum of 7 varieties	£72.95

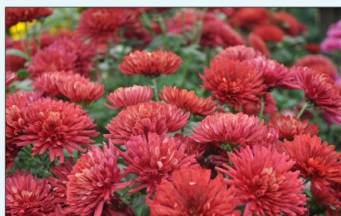

CHARM AND CUSHION MUM

Flowering naturally from September through to December depending on variety, these are ideal for growing in pots, either 1 plant to a 15cm pot or 3 plants to a 25-40cm pot, or at the front of borders, particularly the September flowering varieties. All will benefit from at least one pinching out of the growing tips to produce bushier, more domed shaped plants with more flowers. Later flowering varieties may need some protection though we have had them flowering outside in late November in a sheltered, sunny spot. (22 and 25 = September, 12 = October/November)

All varieties £4.45 each. For quantity discounts, see page 34.

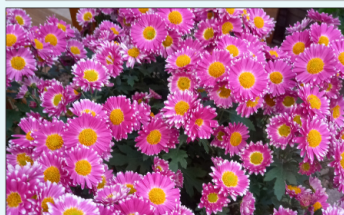

Barbara (22c) Pompon type flowers of deep pink. 30-40cm.

Bravo (25a) Crimson red. AGM. 30-40cm.

Cassablanca (U12) Golden amber. Flowers early October. 45cm.

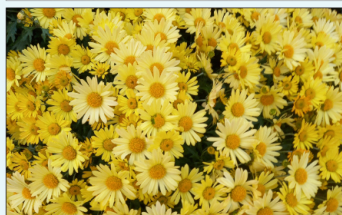

Gladys (U12) Magenta pink with paler tips. Nov. 45cm.

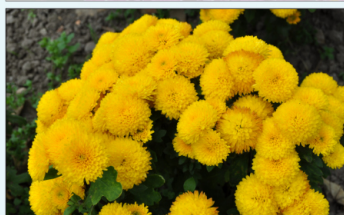

Marker Pens

Edding black markers available as Fine or Medium tips.

£2.95 each

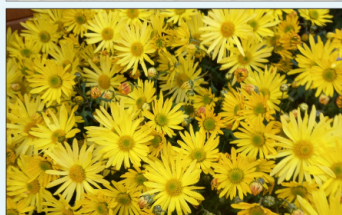

Golden Chalice (12a) Yellow. Flowers end Oct. AM. 45cm.

Holly (22b) Bright yellow with pompon form. AGM. 30-40cm.

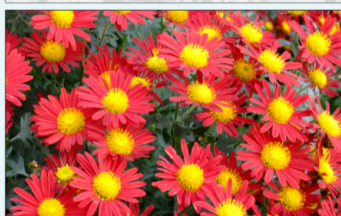

Lighthouse (12) White. Oct. 45cm.

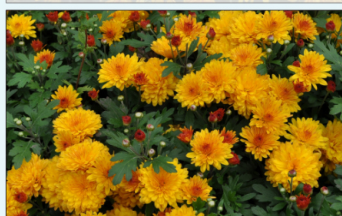

Morning Star (12a) Creamy yellow. Mid Oct. 45cm.

Nicole (22c) White with yellow centre. AGM. 30-40cm.

Redbreast (12a) Red flowers from end Oct. 45cm.

Triumph (U22) Yellow with bronze centre. 30-40cm.

Pests and Diseases

The following are problems you might encounter on both Chrysanthemums and Dahlias. Strong, healthy growing plants are less likely to have issues so we cannot over emphasise the importance of providing good growing conditions for your plants as being the starting point in minimising pest and disease problems. Vigilance and good hygiene throughout the growing season and taking remedial action as soon as a problem is detected will help to ensure the impact to any of the following is minimal.

Aphids/Greenfly cause distortion of the foliage and are one of the main causes of spreading viral diseases.

Blackfly/Melon Cotton Aphid – a more difficult to control member of the aphid family which is more common in the greenhouse.

Capsid Bug -causes distortion of the growing tip by puncturing plant tissues which results in mottling and ragged looking leaves and occasionally distorted flower buds. Often the damage is only seen long after the pest has been present.

Earwigs- leaves and/or petals eaten in an irregular pattern, sometimes with the appearance of being shredded. Seal cane ends with cane caps, or putty. Vaseline on stems will prevent earwigs from getting into blooms.

Thrips- cause a puckering of the foliage and bronzing of the growing tips and can badly mark the flowers, particularly pinks and whites. The yellow or preferably blue sticky traps available for use in greenhouses can help monitor a potential problem.

Powdery Mildew – associated with dryer weather and appears as a white powdery coating on the surface of the leaf.

Virus – Plants, which show a severe mottling of the leaves with yellowing of the veins and an obvious stunting in the growth, may well be infected with virus. Such plants are best removed and destroyed and certainly should not be used for propagation.

Slugs and Snails – young plants in particular can be quickly decimated, especially in damp weather. Various control methods available.

White Rust Affects Chrysanthemums only. Pale yellow green spotting on the upper surface of the leaf is followed by yellowish brown/white pustules on the underside. Remove and burn affected leaves as soon as possible being careful not to handle unaffected plants. Spores need moisture to germinate and spread, so keep the humidity and the foliage dry, ensuring plants are well spaced for adequate ventilation. Good hygiene is important at the end of the season. See cultural notes on page 37 for details.

Leafy Gall- is a disease caused by the bacterium *Rhodococcus fascians*, which enters the plant through wounds in roots or stems and stimulates the plant tissues to grow in a disorganised way, producing dense clusters of distorted, leafy shoots. Good hygiene is the best action to prevent spread.

It can be often confused with similar symptoms produced by physical damage to the plant- eg slug and snail damage to growing shoots.

Dahlia Smut – pale yellow spotting of the lower leaves which slowly develop into brown spots, which dry up and fall out! This is more prevalent in wet seasons and it is advisable to rotate planting where there is a known problem.

PLEASE NOTE - No chemical names have been mentioned as these are constantly under review. Please seek advice from you local garden centre or nursery for the best products currently available. Always use pesticides and fungicides safely and do not exceed recommended dosage rates.

AN INVITATION

Each year we welcome many visitors to our West Heddon Nursery to view the Dahlia and Chrysanthemum fields planted with more than 15,000 plants and 500 varieties. The best time to call and see them is from the end of August to early October.

Don't forget our Nurseries are open all year round with an extensive range of garden plants available, many being home grown. A good range of composts and garden sundries are also stocked along with seeds and bulbs (in season). At our Ovington Nursery you can enjoy browsing through the herbaceous borders in a pleasant setting with superb views over Tyne Valley. A wide range of home grown plants are available all year round.

Opening Times

Nursery: Mon-Sat 9am-5pm

Sun 10am-5pm

Office: Mon-Fri 9am-5pm

(Closed Weekends)

**Our Nurseries and Office are closed between Christmas
and New Year**
